

## Green tribology

Compiled and edited by Michael Nosonovsky and Bharat Bhushan

Published October 2010

**Special offer price for print issue: £47.50 (usual price: £58)**

Tribology is the science and technology of interacting surfaces in relative motion, which involves friction, wear and lubrication. Green tribology is a new area of tribological research defined as the science and technology of the tribological aspects of ecological balance and of environmental and biological impacts.

This volume covers biomimetic approaches in tribology (the lotus and rose petal effects, self-healing, and self-lubricating surfaces), green lubrication, and the application of tribology to renewable energy sources.

The introduction, which is freely available to access, covers the principles of green tribology and research perspectives.

Access online at: [rsta.royalsocietypublishing.org/site/issues/green\\_tribology.xhtml](http://rsta.royalsocietypublishing.org/site/issues/green_tribology.xhtml)

The print issue is available at the specially reduced price shown above. To place an order at this price, please send payment by cheque (made payable to Portland Customer Services) or by Visa or MasterCard (quoting reference **TA 1929**) to:

Portland Customer Services, Commerce Way, Colchester CO2 8HP, UK

# Contents

---

## **Preface: green tribology**

M Nosonovsky and B Bhushan

## **Introduction: green tribology: principles, research areas and challenges**

M Nosonovsky and B Bhushan

## **Wetting transitions on biomimetic surfaces**

E Bormashenko

## **The rose petal effect and the modes of superhydrophobicity**

B Bhushan and M Nosonovsky

## **Designing biomimetic antifouling surfaces**

M Salta, JA Wharton, P Stoodley, SP Dennington, LR Goodes, S Werwinski, U Mart, RJK Wood and KR Stokes

## **Self-organization at the frictional interface for green tribology**

M Nosonovsky

## **Shark-skin surfaces for fluid-drag reduction in turbulent flow: a review**

B Dean and B Bhushan

## **Tribological design constraints of marine renewable energy systems**

RJK Wood, AS Bahaj, SR Turnock, L Wang and M Evans

## **Tribological advancements for reliable wind turbine performance**

MN Kotzalas and GL Doll

## **Influence of boric acid additive size on green lubricant performance**

MR Lovell, MA Kabir, PL Menezes and CF Higgs III

## **Green waxes, adhesives and lubricants**

W Li, XH Kong, M Ruan, FM Ma, YF Jiang, MZ Liu
